CITELINE

TrialScope Disclose: Core Data
Streamline Your Pathway to Success

Introducing TrialScope Disclose: Core Data!

An innovative new unified platform that uses centralized content and contains all required fields for global registries, to help streamline your existing clinical trial disclosure process.

Prepare, approve, and submit data for multiple registries including ClinicalTrials.gov, and jRCT, using a single form.

The centralization of data entry eliminates duplication across multiple systems, saving time.

How it works

Prepare Study
View disclosure content for each required registry

Edit Content
Manage disclosure content to global registry requirements

Review Content
Review and comment on disclosure content in one place

Approve Content
Select the right content for the right approvers — global or local

Submit Content
Create registry submissions from centralized content

How will Core Data benefit you?

Keep Data Consistent

Eliminate Duplication Across Systems

Save Time

Minimize Compliance Risks

Reduce Stakeholder Questions

Enable Global Harmonization

Provide Intuitive Workflow
